

A better environment inside and out.™

Solar Gard® Silver AG 50 Low E Window Film

Your best choice for year-round energy savings

Solar Gard® Silver AG 50 Low E window film can reduce your energy consumption during both cold and warm periods, providing year-round energy and cost savings. The specialized low e coating on Silver AG Low E window film provides your home with exceptional benefits including:

- Reduced winter heating costs by reflecting interior heat back into your home
- Reduced the need for interior cooling during the summer months
- Improved year-round comfort inside your home

Silver AG 50 Low E lets in more natural light than other low emissivity (low e) window film products, resulting in:

- Increased daylighting benefits over other insulating window treatments
- Reduced need for interior lighting during the day
- Superior interior and exterior views

Less costly than installing new low e windows, Silver AG 50 Low E also provides your home with the following benefits:

- Blocks >99% of the sun's damaging ultraviolet rays, protecting your home's precious interiors
- Reduced glare on television screens, computer monitors and displays
- Helps reduce your family's carbon footprint, with the only line of window films scientifically proven to be carbon negative
